INTRODUCTION
This lesson helps third grade students understand the life and culture of the Native Americans that lived in Michigan before the arrival of European settlers in the late 17th century. It includes a comprehensive background essay on the Anishinabeg. The lesson plan includes a list of additional resources and copies of worksheets and primary sources needed for the lessons.

ESSENTIAL QUESTIONS
How has Detroit changed between the late 17th century and today?

LEARNING OBJECTIVES
Students will:
• Explore the geographic and cultural attributes of area known as Detroit.
• Compare and contrast the Detroit area today with Detroit before 1700.
• Read maps to obtain information and make inferences from them.
• Learn what Native American groups traveled through and lived in and near the Detroit area before European settlement.
• Learn which Native American groups lived and still live in Michigan.

MI GLCES – GRADE THREE SOCIAL STUDIES
H3 – History of Michigan Through Statehood
• 3-H3.0.1 - Identify questions historians ask in examining Michigan.
• 3-H3.0.5 - Use informational text and visual data to compare how American Indians and settlers in the early history of Michigan adapted to, used, and modified their environment.

G1 – The World in Spatial Terms
• 3-G1.0.1 - Use cardinal directions to describe the relative location of significant places in the immediate environment.

COMMON CORE ANCHOR STANDARDS - ELA
Reading
• 1 - Read closely to determine what the text says explicitly and to make logical inferences from it.

Writing
• 2 - Write informative/explanatory texts to examine and convey complex ideas and information clearly and accurately through the effective selection, organization, and analysis of content.

Speaking and Listening
• 2 - Integrate and evaluate information presented in diverse media and formats, including visually, quantitatively, and orally.
BACKGROUND ESSAY

The banks of the Detroit River have been a natural gathering place for over six thousand years. People began visiting the Detroit area thousands of years ago, but not much is known about them because they left no written evidence of their lives.

Several Native American groups lived in Michigan over three hundred years ago when the first Europeans arrived in Detroit. At that time, Detroit was an open land of rich soil, forests and grasses. Large fruit trees like crabapple and black cherry grew wild. Animals such as squirrels, muskrats, beavers, deer and bear roamed free and fed on grass, while swans, turkeys, quail, geese, doves and other birds travelled in flocks. The Detroit River was a clear flowing waterway, and schools of fish jumped in and out of the water.

Michigan’s rich land, beautiful water and bountiful wildlife created the perfect land for the Anishinabeg – the people who were living here in the 1600s. The Anishinabeg were also called the People of the Three Fires because they included three different groups, the Ojibwa (Chippewa), the Ottawa, and the Potawatomi. The groups spoke the same language and shared a similar heritage. The Anishinabeg people were devoted to passing on the belief system, legends and culture of their ancestors. They also moved in groups with their families from place to place. They lived in different places for each season, depending on what natural resources were available, to hunt, plant, gather and fish.

It is not known how the People of the Three Fires came to live in Michigan. They may be the descendants of pre-historic peoples who lived here thousands of years ago, or they may have traveled from another place. Native American oral histories say that the groups came from the northeast coast of North America, from present day Canada and New England.

When Europeans arrived in the 1600s, they found that Michigan’s Anishinabeg were split into three groups. The Ojibwa first settled on the eastern shore of Lake Superior. They were good hunters, fishers, and gatherers of maple syrup and wild rice. The Ottawa lived on the eastern shore of Lake Huron, and were primarily trading people. They sometimes travelled hundreds of miles to exchange goods with other tribes. The Potawatomi lived in southwestern Michigan. They were known for their hospitality and good relations with other Native American groups.

All of the Anishinabeg groups were fishers and hunters and gatherers. They hunted for animals such as deer and beaver. They gathered fruits, nuts, wild rice and roots. Sometimes they grew corn, gourds, squash, beans and rice. They had great respect for animals and plants and learned all they could about them. The Anishinabeg believed that they should only use from nature what they needed to live.

Since they had such great respect for nature, the Anishinabeg never let any part of an animal go to waste. They used animal bones to make needles, weapons and beads. Skins were used for clothing, moccasins, shelter coverings, sacks, box hinges and rope. Tendons of the animals, called sinew, made very durable thread.

The Anishinabeg also used plants in many different ways. Cornhusks made good bedding, while corncobs made pegs and pipes. Birch tree bark was used to make canoes or to cover their homes, which were called wigwams. Wigwams were built by placing birch bark over a rectangular dome-
shaped structure. They also used birch bark to make containers by sewing together pieces that then could hold water, food or supplies. Branches of trees made frames for canoes, wigwams and snowshoes, as well as bows and arrows. Sweet grass was woven into baskets and sometimes used as a thread. The earth was also used. Rocks were made into arrowheads, farming tools and mallets. The clay earth made pots.

Anishinabeg children did not receive formal schooling. Instead, they learned by watching and listening to adults and elders. Children joined their families to help make or repair tools for hunting and gathering food or to prepare it for storing and eating. They participated in daily activities depending on their age and gender. It was very important for children to pay attention to what they could learn from adults. They learned to have respect for, and knowledge of, the world around them. They admired adults, elders, storytellers and others with special talents and skills.

Children also listened to stories and legends that the elders told. Elders could be anyone in the group or band recognized as being important, respected or skilled. These stories sometimes took the form of myths. They were a very important part of the ethic system of the group, and described how they understood the world. Today, we may call an ethic system “religion,” but the Anishinabeg and other Native American groups did not have the same vocabulary and way of looking at their world.

Instead of looking through picture albums or reading history books, the children learned about the past through the elders’ stories. These stories taught lessons and helped children develop life skills. The children loved to hear the stories over and over. Soon they knew the stories from memory and told them to others who were younger. This way of learning about the past is called an oral history tradition. Oral history is important for passing down information from one generation to another. Oral history was crucial to learn life lessons and to developing the skills needed to survive. Oral history is still practiced by many cultures today.

Native American children also learned through trial and error. If something worked, they did it again. If it didn’t work, they might have tried again or done something different. Anishinabeg children and young adults also learned through intense training. Many activities in the groups called on special skills and required years of training. These included making tools, decorations, and learning how to administer herbs and other natural resources for healing.

The Detroit area was very important to the Anishinabeg and other Native American groups (including the Wyandot, Iroquois, Fox, Miami, and Sauk) because it was a natural gathering place that was easy to reach. Tribes could reach Detroit from Lake Huron in the north, Lake Erie from the south, and from several other rivers and streams that emptied into or near the river. For thousands of years before the Europeans arrived, many Native American groups came to the river to gather, hunt and fish and to trade with each other. They also gathered to discuss important matters or share news.

The Anishinabeg called the area that is now Detroit the “Bending River.” In the 1600s, there weren’t Native American settlements along the river. Instead, it was a meeting and hunting ground.
MATERIALS USED
Data Elements:
• Map: Michigan in 1760
• Map: Michigan in 2010
• Detroit Descriptions
• Photo: Detroit Skyline, 2010
Worksheets:
• Map Venn Diagram
• Physical Features Venn Diagram
Chalkboard or white board
Document camera or overhead projector
Pencils and paper
Drawing paper (optional)

LESSON PREPARATION
• Make half as many copies of all Data Elements and Worksheets as you have students in the class. They will work in pairs to review them.

LESSON SEQUENCE
1. Explain that today's lesson will put the students map reading skills to use. They will look at different types of maps from different periods in time. The goal of the lesson is to develop an idea of how Detroit looked in 1700 and compare it to Detroit today.

2. Divide the class into groups of 2 or 3 students. Give each group a copy of Map: Michigan 1760 and Map: Michigan 2010. Explain that these maps are the first place they are going to look for information on Michigan during both time periods.

3. Let each group have time to look at each map. As a class, discuss the following questions:
   • What tribes lived in Michigan?
   • Did any live near Detroit?
   • What parts of Michigan have the most population today?
   • Compare highway and Indian trails. Are there any that seem to overlap?
   • Look at the pattern of Native American trails. Are there more in any particular areas? Which area has the most trails leading to and through it?

4. Give each group a copy of the Map Venn Diagram worksheet. Have them work together and complete it with information they see on the maps.

5. Explain that some of the information we need to understand how Detroit looked in 1700s can’t be seen on a map. We know that the same hills that were around in 1700 are still there today, but how can we find out what Detroit looked like?

6. Explain that in addition to maps, there are other primary sources that can tell us this information.

7. Either ask students to read or read together Detroit Descriptions. Have a brief discussion about the reading and list their responses on the board.

8. Ask students to brainstorm about what Detroit looks like today. List responses on the board. Sample questions could include:
   • What do you think of when I say, “Detroit”?
   • What does the city look like?
   • Does it have many trees, rivers, buildings?
   • Do very many people live in Detroit? Work in Detroit?

9. Show the students Photo: Detroit Skyline, 2010. Go over the features in the photograph and compare them to the list on the board.

10. Give each group a copy of the Physical Features Venn Diagram worksheet. Referring to the two depictions of Detroit, in 1700 and today, have them complete the worksheet.

11. End the lesson by holding a group discussion about the differences and similarities of Detroit in 1700 and Detroit today.
LESSON PLAN: COMPARE AND CONTRAST DETROIT: 1701 AND 2011

Detroit in 1700 and 2011 are very different. Use this worksheet to note the similarities and differences between the two time periods.

In each of the circles, list characteristics that are unique to each time period. In the middle, where the circles overlap, write the characteristics they have in common.

DETOUR DESCRIPTIONS

DETOUR RIVER DESCRIPTION

“The islands are the finest in the world. They are covered with forest of the nut and fruit trees, and with wild vines loaded with grapes. From these we made a large quantity of wine. The banks of the Strait [Detroit River] are vast meadows, and the prospect is terminated with some hills covered with vineyards, trees bearing good fruit; and the groves and forests so well arranged that one would think that Nature alone could not have laid out the grounds so effectively without the help of man, so charming was the prospect.

“The country is well stocked with stags, wild goat, and bears, all of which furnish excellent food, and they are not at all fierce as in other countries. There are herds of buffaloes that trample down the flowers and grass as they rush around in their clumsy motion. There are great numbers of moose and elk, which in the size of their horns almost rival the branches of the great trees. Turkey cocks sweep along like clouds overhead.”

- Father Hennepin

MISHOMIS EXCERPT

“From here, the people move to a place identified by one of the earlier prophets as “a place where two great bodies of water are connected by a thin, narrow river.” This river was described as a “deep and fat ribbon of water that slices through the land like a knife.” Many lives were lost crossing this river. This third stopping place was very likely the shores of the Detroit River that connects Lake St. Clair and Lake Huron in the North to Lake Erie in the South.”
